CLAWBYTE

Character field guide

37 illustrated cards / actual runtime values / 16 October 2026

EVERY HIT HAS WEIGHT.

The robot kingdoms, their guardians and the hero who can bring them back.

READ THE UNITS

The hero uses cores: 5 on Normal difficulty. Enemies use HP. An enemy ATK of 1 core removes one hero core before guard or protection. These are different authored units, not directly comparable health pools.

READ ATTACK SPEED

The hero card reports theoretical combo swings per second before impact pauses. Creature and boss cards report the actual authored cadence multiplier; movement, tells, cooldowns, range and phases determine the observed attack rate. A value of 1x does not mean one hit each second.

A REFERENCE, NOT A BALANCE CERTIFICATE

Cards use Normal difficulty, a fresh save and no random traits or upgrades. Later kingdoms, difficulty, equipment and traits change live values. Portraits are captured from the game renderer; GRAVEHORN still uses its current procedural rig.

CLAWBYTE

Damage, defense and hit feel

The numbers behind the cards

01 / Normal and charged attacks

Normal claw: 12 raw HP. Charged claw burst: 38 raw HP (3.2x base, rounded). Single sword: 20 normal / 51 charged burst. Dual swords: 24 normal / 18 per hurricane pass. Joined sword: 33 normal / 26 per outward and returning pass. Multi-hit specials are not a single doubled strike; their distinct authored moves are preserved.

02 / Armor

Armor reduces incoming raw HP by a percentage before elemental and encounter modifiers: max(1, round(raw x (1 - DEF/100))). Example: 20 raw into 12% defense becomes 18 HP. Boss shields, exposed windows, critical hits and the Sage purification rules still apply. Armor never bypasses story protection.

03 / Increasing resistance

Chassis defense is defined per creature. Kingdom armor adds A 0, B 2, C 4, D 6, E 8 and X 8 percentage points. Existing HP escalation remains. On Normal, NULLFANG has 329 HP and 8% DEF; MOTHER has 1,682 HP and 28% DEF. GRAVEHORN has two 329-HP phases.

04 / Impact choreography

Normal contact: 45 ms white silhouette flash, five cosmetic metal fragments, existing impact sound, recoil and about 50 ms hit-stop. Heavy combo: 65 ms flash and nine fragments. Charged contact: 85 ms flash, fourteen fragments, stronger recoil/shake and 120 ms impact pause. Multi-hit specials only add the heavy pause on first contact.

05 / Protection and accessibility

Blocked, protected and zero-damage contacts do not grant successful-hit knockback, charge or debris. NPCs have 100 protected integrity, zero attack and zero attack speed; they are not combat targets. Reduced-motion mode removes the new white silhouette flash and charged camera pause and reduces hardware debris.

06 / Keep a record

Pause > Gear displays live hero stats. Select Export combat log, or press L in Gear, to download the latest 200 resolved hit records as JSON. The export includes build, weapon, room, raw damage, armor, HP lost and result. A local copy is saved on export or page exit. stats.json and this PDF are the versioned balance reference.
